SCOOTERS AND FOLDING POWER CHAIRS

Travel Mobility

Ten lightweight scooters and power chairs that fold, lift and pack for the car, the airport and the cruise ship. All models include an airline-friendly EverRun™ lithium-ion battery.

10 models

Scooters, folding and smart power chairs

25.8 lb

Lightest model, the carbon fibre Cricket LT*

Up to 400 lb

Weight capacity on the Carry On HD

Find your nearest dealer at **goldentechnologies.ca**

*Without cushion, battery or drink holder.

A LEADER IN TRAVEL MOBILITY

Golden has built mobility products since 1985, on one pledge from its founders: "Build it right the first time." In travel mobility, that shows up as products that go further, weigh less and pack smaller, backed by the best warranties in Canada.

The only 400 lb lightweight travel scooter

The Carry On HD brings a full-size seat and a brushless motor to a scooter that still comes apart, with its heaviest piece at 52.5 lb.

Carbon fibre, from 25.8 lb

The Cricket LT and Cricket use a carbon fibre frame that is strong, stiff and light enough for most people to lift.

Smart chairs that fold themselves

The Ally series adds a mobile app and wireless remote, so you can drive the chair to you. The Ally Sport folds and unfolds at the touch of a button.

Designed for cruise and air travel

Cruise Approved models, including the Carry On scooters, Carry On Power Chair, Cricket, Cricket LT and Stride, fold small for stateroom storage, and every travel model runs on an airline-friendly EverRun™ lithium-ion battery.

More range in the box

Both Carry On scooters include a free 6.5 AH spare battery, for up to about 35 km of combined range.

Backed by a lifetime frame warranty

BuzzAround scooters carry a lifetime frame warranty, with 2 years on the drive train, electronics and batteries.

Since 1985
Family-owned, designing and building mobility products in Pennsylvania

Since 2003
Supplier of mobility products to the U.S. Department of Veterans Affairs

Canada
Sold and supported across Canada through Harmony Wellness Group, Barrie, Ontario

Choosing the right travel partner

Choosing a travel mobility product is a big decision. You want a scooter or folding power chair that rides well and packs away easily. When making your decision, consider these six things to find the product best suited to your needs.

1. Weight, and the heaviest piece

The number that matters is what you or a caregiver actually lift into a trunk. Many models come apart, so look at the heaviest single piece, not the total.

Cricket LT: 25.8 lb* · Carry On: heaviest piece 47.5 lb

▶ Watch: loading the Carry On into a trunk without taking its full weight

2. Folds in one piece, or comes apart

Folding power chairs collapse in one step and stay in one piece. Travel scooters break into lighter pieces in seconds. Ally Sport folds itself at the touch of a button.

One piece: Cricket LT, Cricket, Stride, Ally series · Pieces: Carry On (2), XL+ (5)

3. Turning radius

The smaller the circle it needs to turn around, the easier it is to turn in an elevator, a restaurant, a shop aisle or a cruise stateroom.

Tightest: Carry On Power Chair 21″ · Cricket 22″ · Stride 23.6″

4. Weight capacity

Choose a model rated comfortably above the rider's weight. Golden's travel line runs from 265 lb up to 400 lb, the highest of any lightweight travel scooter.

Carry On HD: 400 lb · Ally and Ally Pro: 330 lb

5. Range

Range depends on rider weight, terrain and the battery. A spare battery doubles up the day: both Carry On scooters include one free.

Carry On with spare: up to 35.2 km · Ally Pro: up to 20.9 km

6. Airline-friendly battery

A battery you can remove and carry on board makes a model easy to fly with. Every model here has an EverRun™ lithium-ion battery. See the next page.

All 10 models

Scooter or power chair?

Travel scooter

Steered with handlebars (a tiller), with a roomy deck and a basket. Suits riders who can sit upright and steer with both hands, and want more range for full days out.

Folding power chair

Driven with a joystick, with a smaller footprint that pulls right up to a table. Suits riders who want a tighter turn, an easier transfer and a chair that folds in one piece.

*Cricket LT weight without cushion, battery or drink holder. Ranges are shown in km, tested at a rider weight of 200 lb, and vary with rider weight, terrain and battery.

What makes it airline friendly?

It comes down to the battery. Airlines allow mobility aids, but lithium batteries are regulated dangerous goods, so the battery has to meet the rules for size, packing and where it rides.

AN AIRLINE-FRIENDLY BATTERY IS

EverRun™ LITHIUM-ION

- **Lithium-ion:** light, with no liquid to spill.
- **Removable:** it lifts out in seconds so it can travel in the cabin with you.
- **300 Wh or less:** the limit for a battery removed from a mobility aid.
- **Protected:** terminals covered, in a protective case or pouch.

WATT-HOURS, EXPLAINED

Battery rules are set in watt-hours (Wh). If a label shows only volts and amp-hours, multiply them.

Volts × amp-hours = watt-hours

Example: the Cricket LT's EverRun™ battery is 24 V × 10 Ah = **240 Wh**, inside the 300 Wh limit.

THE LIMITS FOR MOBILITY AIDS

300 Wh	+ 1 spare	or 2 spares
Most for the battery removed from your device	Up to 300 Wh, in your carry-on	Up to 160 Wh each, in your carry-on

Removed and spare batteries travel in carry-on baggage, never in checked bags. Source: ICAO dangerous goods rules, which Transport Canada and CATSA apply in Canada.

BATTERY BAG INCLUDED

Protects the terminals to meet airline rules. Standard with:

Carry On · Carry On HD · Carry On Power Chair · Cricket · Cricket LT · Stride

Flying with a Golden travel product

1. **Tell the airline at least 48 hours ahead**
   In Canada, airlines must carry your mobility aid when you give 48 hours' notice. Give them the model and battery details.
2. **Bring the battery details**
   Pack the owner's manual or battery label showing the watt-hour rating. Agents may ask to see it.
3. **Ride to the gate**
   Ask to ride your scooter or chair to the gate. Many airlines let you ride to the aircraft door, where it is tagged.
4. **Take the battery on board**
   Remove it, protect the terminals and carry it on. The device itself rides in the cargo hold and is returned at the gate upon arrival.

Rules change and each airline sets its own policy. Always confirm with your airline before you fly.

Cruise ship guidelines

Cruise lines now enforce a simple rule: your scooter or power chair has to fit in your stateroom. Guests whose mobility device can't be accommodated in the cabin they booked can be refused at check-in.

What the cruise lines require

- **Stored in your stateroom.** Scooters and wheelchairs can't be left in corridors, stairways or public areas. Lines cite the international SOLAS safety rules for clear escape routes, so a device that tucks under the bed makes the most of a small cabin.
- **Charged in your stateroom**, along with its batteries.
- **Fits through the door.** Carnival, for example, requires a device in a standard stateroom to fit through its 22″ entry door and fold so you can still exit safely. This is where Golden shines: BuzzAround scooters come apart into lighter pieces with convenient carry handles, and the Cricket, Cricket LT and Stride fold in one step, so each piece passes easily through a narrow cabin door.
- **Checked at boarding.** Some lines measure scooters at check-in against the cabin booked.

Before you book

- Fill in the cruise line's mobility device form.
- Compare your device's folded size with the cabin type, or book an accessible stateroom.
- Pack the charger and the battery details.
- Flying to the port? Follow the airline steps on page 4.

Designed to fold away in your stateroom

Stateroom floor space is tight. The BuzzAround Carry On, Carry On HD and Carry On Power Chair are designed to fold low enough to slide right under a standard stateroom bed, so they're out of the way and your cabin stays open. The Cricket, Cricket LT and Stride fold compact to stand in a closet or beside the bed.

Carry On
12″
high folded, without seat

Carry On HD
Under 14″
high folded, without seat

Carry On Power Chair
10″
high folded

Cricket LT
12″
wide folded, rolls on its wheels

Cricket
One step
folds and stands upright

Stride
One step
folds compact for your cabin

Each cruise line sets its own policy, and cabin sizes vary by ship. Confirm with the cruise line before you sail.

†Combined range with the included spare battery. Ranges tested at a rider weight of 200 lb and vary with rider weight, terrain and battery. All models have EverRun lithium-ion batteries, are airline friendly and are Class I medical devices.

Cruise Approved · Airline friendly · New for 2026

Carry On

BuzzAround · Model GB120 · Lightweight portable scooter

The go-anywhere travel scooter. It comes apart into two pieces in seconds and folds just 12″ high, small enough to slide under a stateroom bed. New for 2026: a thicker, contoured seat and sleek blacked-out styling.

- **300 lb capacity**
- **Heaviest piece 47.5 lb**
- **Up to 35.2 km with spare**
- **FREE 6.5 AH spare battery**

Shown in Velvet Red.

View on the website →

FEATURES

Comes apart in two pieces
Four carry handles make each piece easy to lift into a trunk.

Folds flat, 12″ high
Without the seat, for small spaces, closets and under-bed storage.

Two EverRun™ lithium-ion batteries
12.5 AH battery with travel case, plus a free 6.5 AH spare. Both lift out and can be added to your carry-on luggage.

Kickstand with rear basket
Stands the scooter up for storage in tight spaces and holds the spare battery.

Front and rear LED lighting
With an LED battery indicator on the console.

Everyday comforts
USB port, drink holder, cane holder, flip-up armrests and an infinitely adjustable tiller.

NEW | Airline friendly | Cruise Approved | Carbon fibre | Lightest in the lineup

Cricket™ LT

Golden · Model GP309 · Side-folding power chair

Go light, fold fast. A carbon fibre power chair that weighs just 25.8 lb and side-folds to 12″ while staying on its wheels, so it rolls to the car instead of being carried.

- Only 25.8 lb*
- 300 lb capacity
- FREE memory foam cushion
- Class I medical device

Black carbon fibre.

View on the website →

FEATURES

Lightweight carbon fibre
Strong and stiff, at just 25.8 lb without cushion, battery or drink holder.

Side-folds to 12″, stays on its wheels
For easier loading, transport and storage.

Airline-approved battery
Side-mounted 24 V, 10 AH EverRun™ lithium-ion (240 Wh), with a FREE carry bag.

FREE memory foam cushion
Plus an integrated drink holder.

Flip-up armrests
Simplify side transfers.

Freewheel mode and electro-mechanical brakes
Push it manually when you need to.

SPECIFICATIONS

Weight capacity	300 lb
Top speed	6 km/h
Range	Up to 15.3 km
Turning radius	29.5″
Ground clearance	1.25″
Length × width × height	36″ × 24″ × 33″
Floor to top of seat	19″
Seat width × depth	18″ × 18″
Weight with memory foam cushion	31.3 lb
Weight with base cushion	29.5 lb
Weight without parts*	25.8 lb
Battery weight	3 lb
Tires	Flat-free, 11″ rear, 6.5″ front

Rolls, doesn't carry
Folded, the Cricket LT stays on its wheels, so you roll it to the trunk and lift only at the last step.

Battery bag included
Protects the 240 Wh battery when it travels in the cabin.

WARRANTY

- 5 years on the frame
- 13 months on drive train and electronics
- 1 year on the battery

*Without cushion, battery or drink holder.

Airline friendly · Cruise Approved · Spring suspension

STRIDE

Golden · Model GP301 · Foldable power chair

Comfort and style for full days out. Front and rear spring suspension, a tall padded seat and a tight turning radius, in an aluminum chair that folds in one step and stows in the trunk.

- As light as 52.6 lb*
- 300 lb capacity
- 23.6″ turning radius
- Class I medical device

Black with a two-tone grey and black seat.

View on the website →

FEATURES

Comfort spring suspension
Front and back, for a smooth ride indoors and out.

Easy one-step folding
With a strap to keep it closed, and it stands on end for storage.

Removable compact joystick
With a USB charger, for driving right up to a table or through a doorway.

Removable padded seat and tall back
For long-lasting comfort while sightseeing, shopping or dining.

Storage built in
Under-seat storage and a seat-back pocket.

Airline-approved battery
24 V, 10 AH EverRun™ lithium-ion (240 Wh), with off-board charging and a battery bag included.

SPECIFICATIONS

Weight capacity	300 lb
Top speed	6 km/h
Range	Up to 15 km
Turning radius	23.6″
Ground clearance	1.6″
Length × width × height	42.5″ × 24.4″ × 38.6″
Folded size	42.5″ × 24.4″ × 15.7″
Floor to top of seat	22″
Seat width × depth	17″ × 18″
Weight assembled	58 lb
Weight without parts*	52.6 lb
Battery weight	3.8 lb
Tires	Flat-free, 12″ rear, 8″ front

Pulls right up to the table
A compact joystick and tight turning radius make restaurants, shops and cabins easy to get around.

WARRANTY

- 5 years on the frame
- 13 months on drive train and electronics
- 12 months on batteries

*Without battery, joystick, cushion and bag.

*Without battery, joystick, cushion and bag. Ranges tested at a rider weight of 200 lb and vary with rider weight, terrain and battery. All models are Class I medical devices.

Before you travel

A few minutes of planning makes for a smooth trip, by air or by sea.

1. **Tell your airline at least 48 hours ahead**
   Share your model, weight, folded dimensions and battery type when you book. Ask for gate delivery so your scooter or power chair is waiting at the aircraft door.

2. **Know your battery's watt-hours**
   Keep the battery label or sell sheet handy. Lithium-ion batteries up to 300 Wh are generally accepted; spares are limited to one up to 300 Wh or two up to 160 Wh.

3. **Protect the battery terminals**
   Removed batteries travel in the cabin in your carry-on luggage. Cover the terminals or use the included travel carry case to meet airline guidelines.

4. **Complete your cruise line's mobility form**
   Most cruise lines ask you to declare your device before sailing. Confirm the stateroom door width and that your scooter or chair can be stored inside the cabin.

5. **Pack the charger in your carry-on**
   Don't forget your charger, and bring a plug adapter if you're heading abroad. Charge your battery overnight so you start each day at full capacity.

6. **Label every piece**
   Put your name and phone number on the seat, frame and battery, and take a photo of your device before you hand it over.
